Fire resistance standards

The fire resistance rating indicates the duration in minutes for which a passive fire protection system can withstand a standard fire resistance test.

Soudal FR products have been independently tested against British and European norms such as EN 1366-4 and BS476 part 20, and they have been shown to have fire resistance ratings of up to 4 hours depending on configuration. These results are summarised in our test and classification reports, which are available on request.
